

EXPERIENCE

3mensio Medical Imaging, Software Developer (consultancy through ALTEN Nederland)

04.2025 – 03.2026

- Part of a new team developing the web-based version of the 3mensio imaging software, supporting the transition from a desktop application to a cloud-accessible solution. The frontend is built with TypeScript (Vue.js) and the backend is based on .NET 8.
- Designed and implemented a Windows service (.NET 8) that integrates the web platform with external healthcare systems, enabling seamless cross-platform data access for clinicians.
- Contributed to the overall development of the ASP.NET Core backend, acting as the web gateway. Mainly involved in user management and authentication using OIDC, LDAP, and local authentication.
- Deployment to cloud (AWS) using CloudFormation, leveraging EC2, AWS SQL Server, Route 53, and AWS Lambda. Used AWS CDK for organizing and managing infrastructure components.
- The web-based solution improved accessibility for customers in remote and resource-constrained environments, enhanced interoperability with partner systems, and accelerated release cycles for new versions and service packs.

ASML, Virtual Fab Infrastructure, Software Developer (consultancy through Capgemini Engineering)

09.2022 – 04.2025

- Managed and improved a Python-based (Python 3.11) virtualization platform used to simulate semiconductor manufacturing processes for customers, enabling cost-efficient and time-saving interoperability testing before actual hardware production.
- Migrated test execution from bare-metal virtual machines to Jenkins running on Kubernetes, enabling 10× more parallel test execution and reducing infrastructure failures from every few days to approximately once every two months.
- Set up and managed the new Jenkins environment, including further optimizations for complex testing scenarios.
- Led the migration from a Django monolith to Django REST + Angular microservices running on Kubernetes (using Helm and RabbitMQ), resulting in zero-downtime releases, improved scalability, and enhanced security through OAuth2 and RBAC implementation within the microservices.
- Implemented an observability stack (Elasticsearch, FluentD, Kibana, OpenTelemetry) to provide real-time insights, enable automatic scaling, and support data-driven infrastructure improvements.
- Acted as the primary point of contact for production incidents and recovery actions, providing fast and transparent solutions while implementing preventive measures.

Philips Innovation Services, Software Developer (detaching door Sogeti Nederland)

07.2021 – 08.2022

- Responsible for maintaining and extending an existing test automation framework developed in C# (.NET Core and .NET Framework) and SpecFlow, used by testers to automate testing of patient monitoring systems.
- Delivered key components including a patient simulator developed in C#, capable of simulating non-standard numerical vital signs in bedside monitors, and a new user interface for testing patient information systems from the nursing staff perspective.
- Developed internal tools to support testers in automating non-test-related tasks, including a Python package to identify and visualize differences between different versions of use-case scenarios for monitoring systems.

Bravilor Bonamat, Software Developer (detaching door Sogeti Nederland)

04.2021 – 07.2021

- Developed a custom test automation framework for GUI testing of the company's next-generation coffee machine, replacing manual testing. The framework was built using Python and Lua and integrated with Robot Framework for BDD-style testing.
- Created Docker-based deployments to execute automated tests across multiple microcontroller environments hosting the GUI.
- Implemented a CI/CD pipeline using Atlassian Bamboo to automate GUI testing and external software deployments to devices after each update.

CERTIFICATIONS

AWS	AWS Certified Developer	February 2026
The Linux Foundation	Certified Kubernetes Application Developer (CKAD)	October 2024
The Linux Foundation	Kubernetes Cloud Native Associate (KCNA)	September 2024
TMAP Foundation	TMAP Suite Test Engineer	April 2021

EDUCATION

Technische Universiteit Delft	MSc. Mechanical Engineering, High Tech Engineering Major	08.2018 – 08.2020
University of Melbourne	BSc. Mechanical Systems	07.2014 – 06.2017

LANGUAGE

English (Native Level), Dutch (B2 Level), Indonesian (Native Level)

SKILLS

Programming Language	C#, Python, TypeScript, SQL, Bash, Powershell, Lua
Frameworks	.NET Core & Framework, Angular, Entity Framework, Django, Flask, SQLAlchemy, Moq, XUnit, Pytest, Specflow, Jasmine, Groovy, NextJS
Messaging	RabbitMQ (AMQP), MQTT, WebSockets, HTTP/HTTPS
Databases	MySQL, SQLite, Postgres, MongoDB, Redis, InfluxDB, MSSQL
DevOps	Docker, Kubernetes, Jenkins, Atlassian Bamboo, GitHub Actions, TeamCity
Tools	Git, Grafana, Loki, k9s, Rancher, Splunk, Helm, Swagger, Jira, Claude Code, Github Copilot
Concepts	OpenAPI, JWT, OAuth2, SOLID, Test Driven Development, Behavior Driven Development
